| 19   | Total Required Stable Funding  | 27,772        | 26,489        | 29,150        | 28,177        | 29,256        |  |  |
| 20   | Net Stable Funding Ratio (%)   | 199%          | 191%          | 180%          | 185%          | 185%          |  |  |

The increase in CET1 and Total Capital Ratios in September 2021 is attributed to a decrease in Total Risk Weighted Assets ("RWAs") by \$573m primarily from the reduction in Credit Risk RWAs (\$519m) as a result of lower corporate exposures (\$532m).

Note:

^ Unaudited

\* Audited

# This refers to country level ratio for all currency

The Countercyclical Capital Buffer ("CCyB") is the weighted average of the country-specific CCyB requirements that are applied by national authorities in jurisdictions to which the Bank has private sector credit exposures. The effective country-specific CCyB requirement for Hong Kong is 1%, and the applicable weight is 1.01%.

Note:

(1) Minimum capital requirements are calculated at 10% of RWA.

# 4. Liquidity Coverage Ratio

#### 4.1 Liquidity Coverage Ratio ("LCR") Disclosure for the Quarter ended 30 September 2021

The objective of LCR is to promote short-term resilience of the liquidity risk profile of banks by ensuring that banks have an adequate stock of unencumbered High Quality Liquid Assets ("HQLA") to meet their 30 calendar day liquidity stress scenario. The Bank and the Singapore Branch of The Hongkong and Shanghai Banking Corporation Limited ("Branch") have obtained MAS approval to comply with requirements set out in MAS Notice 649 "Minimum Liquid Assets and Liquidity Coverage Ratio" at HSBC Singapore Country-level Group basis ("Country-level Group").

The following disclosures as per MAS Notice 651 "Liquidity Coverage Ratio Disclosure" are consistent with compliance to MAS Notice 649, which is at Country-level Group basis. The Country-level Group is required to maintain daily All-Currency LCR of 50% and Singapore dollar ("SGD") LCR of 100%.

# 4.1.1 Average Country-level Group All-Currency LCR for the Quarter ended 30 September 2021 (Number of data points: 92)

| 23   | Liquidity Coverage Ratio (%)  |                                | 183 %                        |

#### 4.1.3 Liquidity Coverage Ratio

The Country-level Group maintains a healthy liquidity position with average All-Currency LCR and SGD LCR at 328% and 183% respectively (above the respective regulatory requirements of 50% and 100%) for the quarter ended 30 September 2021. The main drivers of the LCR are 1) movements in customer loans/ deposits; 2) wholesale interbank lending/borrowing; 3) movements due to positions falling into or out of the LCR 30-day tenor and 4) derivative cashflows (for SGD LCR).

#### i. Composition of HQLA

The Country-level Group's pool of HQLA consists mainly of Level 1 HQLA (highly rated unencumbered government and central bank securities). These securities can be readily liquidated through sale or repurchase ("Repo") transactions into cash to meet cash flow obligations under liquidity stress scenarios.

#### ii. Currency Mismatch in the LCR

The Country-level Group can, if required, access the FX swap markets to manage any currency mismatch. This forms part of the Business-As-Usual activities undertaken by Markets Treasury ("MKTY") for surplus deployment and managing liquidity risks (i.e. swap foreign currency surplus funds into SGD HQLA).

#### 4.1.4 Liquidity and Funding Risk Management

HSBC has an internal liquidity and funding risk management framework ("LFRF") which aims to allow it to withstand very severe liquidity stresses. It is designed to be adaptable to changing business models, markets and regulations. Asset, Liability and Capital Management ("ALCM") is responsible for the application of the LFRF for the Country-level Group.

The elements of the LFRF are underpinned by a robust governance framework, the two major elements of which are:

- Asset and Liability management committee ("ALCO"); and
- annual Internal Liquidity Adequacy Assessment process ("ILAAP") to ensure that all significant liquidity and funding risks are identified and assessed, and that an appropriate risk management framework and risk appetite is implemented to mitigate these risks.

#### i. Overall Adequacy of Liquidity Risk Management

The Internal Liquidity Adequacy Assessment ("ILAA") document sets out the Country-level Group's approach to liquidity and funding risk management and covers the following components:

- review of the appropriateness of the liquidity risk management framework;
- identification of all liquidity and funding risks by specific risk drivers commensurate with the balance sheet;
- liquidity stress testing to assess adequacy of liquidity risk buffers;
- calibration of risk tolerance and appetite levels; and
- assessment of the Basel Principles of Sound Liquidity Management.

The final conclusion of the ILAAP is that the Country-level Group:

- maintains liquidity resources, which are adequate in both amount and quality at all times, and ensures that there is no significant risk that its liabilities cannot be met as they fall due; and
- ensures its liquidity resources contain an adequate amount of HQLA and maintains a prudent funding profile.

#### Liquidity and Funding Risk Management Framework

The key aspects of the internal LFRF implemented by the Country-level Group to ensure an appropriate overall liquidity risk profile are:

- minimum LCR requirement (including individual currency LCR requirement);
- minimum Net Stable Funding Ratio ("NSFR") requirement;
- legal entity depositor concentration limit;
- 3-month and 12-month cumulative rolling term contractual maturity limits (covering deposits from banks, non-bank financial institutions and securities issued);
- annual Internal Liquidity Adequacy Assessment;
- intraday liquidity monitoring and limits;
- liquidity funds transfer pricing;
- Liquidity Contingency Plan ("LCP"); and
- forward looking funding assessments.

The LCR and NSFR metrics are supplemented with an internal liquidity metric in 2021.

Pillar 3 Disclosures as at 30 September 2021

#### ii. Risk Management Teams

Whilst overall liquidity and funding management is an ALCO responsibility, the day-to-day management and monitoring rests with MKTY and ALCM respectively. ALCM manages the balance sheet with a view to achieve efficient allocation and utilization of all resources. It assists senior management to review liquidity and funding risks to ensure their prudent management. Liquidity and funding risks are monitored daily and reported to ALCO regularly.

MKTY, within Global Markets, is responsible for managing cash, short-term liquidity and funding for the Country-level Group. This includes deployment of commercial surplus as well as accessing wholesale senior funding markets if needed.

Treasury Risk Management function ("TRM"), a dedicated second line of defence, provides independent oversight of Treasury risk for the Country-level Group including liquidity and funding risk. TRM is responsible for review and challenge of first line activities, and is responsible for policy and risk appetite/ limit setting. In summary, the high-level responsibilities of the second line are as follows:

- to monitor compliance of first line (i.e. ALCM and MKTY) within the internal LFRF/regulatory requirements;
- providing review and challenge to the first line on ALCO limit requests; and
- monitoring of ALCO risks against approved risk appetite measures.

#### iii. Concentration of Sources of funding

The Country-level Group maintains a diversified funding base across retail and wholesale depositors. Balance Sheet and NSFR projections are regularly discussed in monthly ALCO meetings to ensure that the Country-level Group remains well-funded to support the business strategy. Internal metrics on concentration of funding are also embedded in ALCO limits to monitor funding risks.

#### iv. Stress Testing

The Country-level Group conducts various regulatory and internal liquidity stress testing exercises (with different severity/scenarios that include longer time horizons beyond the 30-day LCR period) to strengthen the overall liquidity risk management. The stress tests results validate that the Country-level Group continues to hold sufficient HQLA to withstand a range of liquidity stress scenarios.

#### v. Country-level Liquidity Contingency Plan

The LCP ensures that the Country-level Group has an actionable plan in place to cope with a liquidity crisis. It establishes a collection of 1) warning indicators with predetermined triggers to detect any early signs of liquidity stress; and 2) specific mitigating actions that can be applied to address the stress scenario. The Country-level Group LCP is reviewed and approved by ALCO annually.
